## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, *the step of "comparing the adjusted searcher thresholds..." and the step of "identifying the optimal propagation paths" as recited in claim 9* must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Regarding claims 1,9,13 and 21, in its respective lines, recite "calculating a scaler based on the ISCP measurements only". It appears from the specification and the corresponding figure, the limitation is described on p.9-10, wherein the

element of 305 performs the function of "calculating a scaler". The specification describes scaler calculator 305 performing the function of calculating the scaler based on the normalized value of the total ISCP. And further, the normalized value is obtained by calculating  $x/y$ , wherein  $x$  is the total ISCP and  $y$  is the number of uplink connections  $U$  times the number of threshold updates, note first paragraph on p.10. Hence, the step of calculating is based on the normalized value of the total ISCP, wherein the normalizing is based also on the number of uplink connections  $U$  times the number of threshold updates. Therefore, the claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art of how the step of "calculating a scaler based on the ISCP measurements only" is performed.

Claims 2-8,10-12,14-20 and 22-24 directly or indirectly depend on claim 1,9,13 or 21.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kim et al. US 6,816,470 B2 teach a system determining ISCP from a received signal.

Aoyama et al. US 6,968,023 teach a system comprising an interference cancellation apparatus comparing a signal to a threshold wherein the threshold used is stored in a memory.

Luo et al. US 7,046,963 teach estimation of interference signal and scaling of a signal.

Hagin-Metzer US 2004/0198294 teaches determination of signal to interference ratio based on ISCP.

Lee et al. US 2005/0032540 A1 teach a receiver estimating interference power and calculating a threshold based on the result.

Peng et al. Handover Performance Analysis in TDD-CDMA Cellular Network 2003, IEEE, p.806-811, teach determination of signal to noise interference ratio based on ISCP.
